Microcomputer disks of the appropriations data are available from the Center for Higher Education, 331 DeGarmo Hall, Illinois State University, Normal, IL 61761. The data are in tabular form for each state for each fiscal year since FY1980 to FY1990, inclusive. The software program used is LOTUS 1-2-3, release 2.01. Price: \$25.00 (prepayment preferred). For more information in this regard, please telephone Gwen Pruyne (309) 438-5405.

STATE SUPPORT OF HIGHER EDUCATION: A RETROSPECTIVE OF FY1990

Introduction and Purpose

This annual report of state tax appropriations for the operating expenses of higher education in the 50 states continues the "longitudinal study of state tax support of higher education in the United States," begun by M. M. Chambers in 1958. In 1960, The National Association of State Universities and Land-Grant Colleges published the first volume of Appropriations of State Tax Funds for Operating Expenses of Higher Education. These state tax appropriations data are published in three slightly different forms during the year. After they are collected from a network of "correspondents" in the 50 states, the data are published as soon as possible in an issue of Grapevine, the monthly research report published by the Center for Higher Education at Illinois State University. Second, they appear in somewhat abbreviated form in an October issue of The Chronicle of Higher Education. Third, shortly after the beginning of the calendar year, they are published in comprehensive form by the National Association of State Universities and Land-Grant Colleges.

What the Figures Are Intended to Mean (Page 12) The reader's attention is directed to this explanatory page which outlines which data which are included in, as well as excluded from, Grapevine. These guidelines are used by the Grapevine correspondents in an effort to achieve greater consistency between states and over time. These data reflect total state tax effort for higher education. The major features of these appropriations data are their timeliness, accuracy and comprehensiveness.

The reports are the most timely available because they initially are published as soon as possible after legislative decisions are made. There are other studies of state support of higher education which are available later in the year. The reader is advised to consult these sources which, in addition to state tax appropriations, include student tuition, local taxes, and related information. These sources include the National Comparison of Financial Support for Higher Education, prepared by Jackie Johnson of the Higher Education Coordinating Board in the State of Washington, and State Profiles: Financing Public Higher Education by Kent Halstead of Research Associates, 2605 Klingle Road, N.W., Washington, DC 20008. At a later time, a complete compilation of finance data is available in State Higher Education Profiles, published by the Center for Education Statistics, U.S. Department of Education, Washington, DC.

The state tabulations are comprehensive in that they include institutional figures as well as statewide totals. Each state table includes two columns of figures: those for the current fiscal year and those for the preceding fiscal year. In recent years, about one-half or more of the state correspondents have updated their initial <u>Grapevine</u> reports. In some states the revisions are made by legislatures and in others they result from gubernatorial decisions. The revisions are included so that these data may be as accurate as possible.

Analysis of Trends in State Support for Higher Education

There are three prominent characteristics of state tax appropriations for higher education for FY1990. First, over \$39.3 billion were appropriated for higher education in the 50 states. Second, this amount represented the largest dollar gain (\$2.7 billion) over the preceding year in a full decade. Third, the 7.5% one-year gain from FY1989 to FY1990 was larger than the one-year percentage gains in five of the previous seven years. The national two-year percentage gain of 14.3 in FY1990 was larger than that in four of the preceding six years.

Table 1

STATE HIGHER EDUCATION SUPPORT DURING THE 1980s

Fiscal Years	1980	1981	1982	1983	1984	1985	1986	1987	1988	1989	1990
Billions of Dollars	19.2	20.9	23.1	24.4	25.9	28.4	30.7	32.2	34.4	36.6	39.3
1-Yr Gain (\$billions)	2.1	1.7	2.2	1.3	1.5	2.5	2.3	1.5	2.2	2.2	2.7
1-Yr Gain (Percent)	12.1	9.6	10.1	5.6	5.9	9.7	8.0	4.8	6.8	6.3	7.5
2-yr Gain (Percent)	24.3	22.9	20.7	16.3	11.8	16.2	18.8	13.1	12.0	13.5	14.3

Nationwide Gains Table 1 presents a statistical view and Figure I (page 7) presents a graphic view of the decade of the 1980s, according to the annual dollar gains and percentage gains in state tax support for higher education. During this decade, the magnitude of state tax support for higher education more than doubled from \$19.2 billion to \$39.3 billion. There were one-year dollar gains of less than \$2.0 billion in four of the years, with the low of \$1.3 billion reported in 1983. There were gains of more than \$2.0 billion in seven years, and the high of \$2.7 billion occurred this year (FY1990). In one-year percentage gains for the decade, the lowest gain of 4.8% was reported in 1987, there were four years when one-year gains were over 9%; and, in FY1990, there was an 7.5% gain. In two-year percentage gains for the decade, the low point (lower than 12%) was reported in 1984. For FY1990, the two-year gain of 14.3% was higher than was reported in four years during the 1980s.

Recent Trends in Two-year Gains Table 2 displays three groupings of states: those which had increasing two-year percentage gains from FY1989 to FY1990, those which had decreasing two-year percentage gains from FY1989 to FY1990, and those which reported identical two-year percentage gains in the two years. This year, there were 31 states in the first 15 states in the second group; and four states with identical two-year percentage gains in the two years. As a comparison, in FY1989, there were 26 states with increasing two-year gains, and 20 states with decreasing gains between FY1988 and FY1989. Two years ago, only 17 states reported increasing two-year gains, and 28 states reported decreasing two-year gains between FY1987 and The evidence supports the FY1988. observation that there was stronger state support for higher education this year than there was in the recent past.

Notes: The data in the tables and on the map are as of November 1, 1989. Revisions received after that date will appear in next year's edition of this publication.

Of the 31 states reporting increasing two-year gains from FY1989 to FY1990, three had gains of 25 points or more (Alaska, Illinois and North Dakota), and two others (Maryland and Nevada) had gains of 11 and 12, respectively. The remainder had changes in gains of less than 10 points, but in this group there were three states going from negative percentages in FY1989 to positive percentages in FY1990. Among the 15 states with decreasing two-year gains, only four had decreases greater than 10 points (Massachusetts, Connecticut, New Hampshire and New Jersey) and seven states decreased five or less points from FY1989 to FY1990. Four states reported identical percentage gains from FY1989 to FY1990: Florida (14.7%, rounded to 15%) was slightly above the national weighted average of 14.3%, Hawaii exceeded the national average at 20%, and Montana (4%) and Wyoming (4%) were below the national average.

The Megastates There are eleven, heavily-populated states having large higher education systems with numerous campuses and relatively large enrollments. Each megastate annually appropriates more than one billion dollars for higher education. Interestingly, these 11 megastates were distributed fairly evenly across the four quartile groupings of states, ranked on two-year percentage gains. There were two megastates in the highest quartile: Illinois led with a 25% two-year gain, followed by Virginia at 21%. Three states appeared in the second quartile: Texas had an 18% gain; Pennsylvania, 16%; and Florida, 15%. There were four states in the third quartile: North Carolina, 14%; Ohio, 13%; California, 13%; and New Jersey, 12%. Two megastates appeared in the fourth or lowest quartile: New York, 11%; and Michigan, 8%.

A Regional View of FY1990 Table 3 arranges the 50 states according to geographic quadrants and quartiles, using a rank order of two-year percentage gains. Geographic quadrants were formed by dividing the United States into four relatively even regions by locating a "centerpoint" at the northeast corner of Missouri. The Mississippi River divides East from West, the Ohio River and the southern border of Pennsylvania divide Northeast from Southeast, Alaska is placed with the Northwest, and Hawaii is placed with the Southwest. The Northeast has 14 states; the Southeast has 12, the Northwest has 11, and the Southwest has 13 states. The quartile grouping, based upon two-year percentage gains, is slightly different in size each year due to "natural breaks" in the range of percentages. This year, there were 12 states in the highest quartile; 11 states in the second highest quartile; 15 states in the third; and 12 states in the fourth or lowest.

The highest quartile of 12 states ranges from two states reporting two-year gains at or above 30% (Maryland, 34%; Nevada, 30%) to six states with two-year gains between 27% and 21%; to a cluster of four states around 20%. In the second quartile: four states converged around 17% to 18%, five at 16%, and two at 15%. In the third quartile: seven were at the national average of 14%, six at 13%, and two at 12%. In the lowest quartile, there were three at 11%, eight under 9%, and only one state reported a negative percentage, Massachusetts at -9%.

Quadrants	NW.	SW**	NE	SE	Totals
Highest	2	4	3	3	12
Second	3	2	2	4	11
Third	3	4	5	3	15
Lowest	3	3	4	2	12
Totals	11	13	14	12	50

Combined with the map showing two-year percentage gains, Table 3 helps identify a pattern for FY1990 characterized by a less favorable performance by states in the Northeast, and improved performance by states in both the Northwest and Southwest. Last year (FY1989), there were five Northeastern states in the top quartile and only two Northeastern states in the bottom quartile. This year, there were three Northeastern states in the top quartile, and four in the bottom quartile. There were nearly the same number of states in the two middle quartiles in the two years. In the two quadrants west of the Mississippi River, there were six states in the top quartile this year, compared with five states last year. However, there were only six states in the West appearing the lowest quartile this year, compared with 11 states last year. In the middle two quadrants, there were 12 western states this year and eight states last year.

Regional and Revenue Variations among the States

It is easy to make too much of regional patterns in state higher education support. Regions are convenient to identify and observations about regional variations seem to be apparent. Usually, on closer examination, regions exhibit as many exceptions as commonalties.

Nonetheless, one year ago, it was observed that "FY1987 and FY1988 were characterized by clear economic resurgence in New England, a strong performance of COSSIA SIAISS, 2000 SOURCE difficulties in the Southeentral and Northern Plains regions." Comparatively, two of the New England states appeared in the top quartile this year (Maine and Vermont), and the four remaining New England states were either in the bottom quartile (Massachusetts, New Hampshire) or near the bottom quartile (Connecticut and Rhode Island). Also, at or near the bottom quartile were New York and New Jersey. The remaining East Coast states were at or above the weighted national average percentage gain of 14% (North Carolina and Delaware were at 14%). On the West Coast, including Hawaii, two of the states were above the national average and the other two were only one point below the national average. The "severe economic difficulties" in the country's midsection one year ago gave way to Illinois, Missouri, Kansas, Nebraska and North Dakota rising to the top quartile. In the Southcentral region, both Louisiana and Arkansas remained in the bottom quartile where they were in FY1989, while Oklahoma nearly doubled its gain from 8% to 15%.

In summary, it appears that in FY1990, the Northeast (specifically New England) was unable to continue the economic resurgence which was strong in the early 1980s. There appears to be a resumption of higher education support in the middle of the nation, and a "balanced" showing of the megastates. While in FY1988, eight states had negative two-year percentage "gains," and in FY1989, there were three states with negative percentages, in FY1990, only one state was in that category.

State Revenue Capacity Of the numerous variables affecting the extent to which a state is able to support higher education, none are more important than revenue capacity and "lawmaker willingness." Without the availability of revenue, a state is unable to support state services because deficit spending is not an option. In an age when there is keen competition for available state dollars, revenue capacity does not mean automatic increases. Therefore, lawmakers--both governors and state legislators--must be willing to make the necessary appropriations for the support of higher education. To this end, the amount and effectiveness of the way in which colleges and universities represent themselves in state capitals, lobbying if you will, has increased markedly during the 1980s.

Grapevine.

word of the been gived as a vey aside in a state a self notice a

Each year, the National Conference of State Legislatures (NCSL) conducts a summer survey of legislative fiscal officers and publishes a report entitled State Budget Actions in (year). Data from this NCSL survey are included in Table 4. The column labeled "general fund increase" is based on the projected growth rates of a state's general fund revenues from FY1989 to FY1990, as reported by NCSL. This revenue variable represents a state's fiscal capacity to support higher education. "Lawmaker willingness" is represented in proxy form in the column labeled "state appropriations increase" and is an estimate by legislative fiscal officers of the extent of growth in state appropriations from FY1989 to FY1990. In a sense, therefore, the revenue column provides an answer to the question, "To what extent did states have revenue capacity?" The appropriations column provides one answer to the question, "Were states willing to appropriate available revenue to public services?" Finally, the remaining column in Table 4 which is labeled "higher education increase" is based on data reported in Grapevine, representing the actual effort for higher education made by the state over a two-year period.

Comparing the top ten and bottom ten states in two-year percentage gains, as shown in Table 4, those states appropriating relatively more for higher education had the revenue capacity to fund state services, in general. On the other hand, the ten states with the lowest two-year percentage gains in appropriations for higher education did not have as much revenue capacity and were not able to make as much effort in appropriations increases, generally.

In Table 4, the mean values from the top and bottom groupings of states are included for FY1987, FY1988, and FY1989. Comparing these means between the top and bottom groupings of states for these other years with the means for FY1990, it appears that states had relatively less revenue capacity in FY1990 than they had in FY1988 and in FY1989. In addition, it appears that states made a proportionately greater effort for supporting services in general, as indicated by the 10.4% percentage

increase in state appropriations, than they did in the previous years. At the same time, states' support for higher education, as measured by two-year percentage gains remained at a high level (over 25%) for the top group of states and was significantly higher (4.8% increase) for the bottom group in FY1990, than in the previous years.

Additional Considerations

There were moderately strong gains in state support for higher education in FY1990. One explanation for this may have to do with the priorities which states assign to higher education vis-a-vis other areas. As indicated in the NCSL survey, higher education was identified by legislative fiscal officers as the highest priority issue in four states: Idaho, Minnesota, North Dakota, and Washington. Utilizing Grapevine data, three of those states had two-year percentage increases which were above the weighted national average of 14%, and Idaho was at the national average. Higher education, however, did not fare as well when elementary-secondary education was listed as the top priority which occurred in nine states. In these nine states, higher education support was in the bottom half of state rankings in two-year percentage gains. In six of the nine states where legislative fiscal officers identified corrections as a leading fiscal issue, state appropriations for higher education were in the bottom half as measured by two-year percentage gains.

Taxation has been cited as a key issue in a state's ability to provide greater support to higher education. The NCSL survey identified 12 states where taxation was identified as a leading issue. In nine of those 12 states, higher education fared relatively well with the nine states ranking in the top half in two-year percentage gains for higher education. Only in Arkansas, New York, and Wisconsin was taxation rated as a leading issue, and these states were in the lowest quartile of two-year percentage gains for higher education. The revenue from additional taxes may be critical in increases in state support for higher education.

Two additional factors emerge in an analysis of the reasons for a substantial increase in state support for higher education this year. They include support for student financial aid and state support for community colleges. In 37 of the 50 states student finance aid was reported as a separate element to Grapevine. In these states, there was a 30% two-year gain for student aid, an amount which was more than twice the national weighted average of 14%. States have made strong efforts to increase funds going to student aid during a period when student tuition levels have been increasing rapidly. In state support to community colleges, there were 40 states reporting separate amounts for community colleges. In this grouping of states, there was a 17% two-year gain in appropriations to community colleges. Community colleges, in a number of instances, have taken the lead in establishing partnerships with business in job training and in technical training. These areas are related to economic development and would appear to have been a sound investment in attracting increased state support. Caution is needed in interpreting these findings, because these data are not designed to segment specific areas with operating budgets, such as student aid and community college support. It does appear that states, however, are responding to identified concerns and needs in both areas.

Comparative Higher Education Finance Measures

Comparative higher education finance measures are used widely by researchers and analysts in making comparisons among states in effort for higher education. Two of the more commonly used such measures are appropriations per capita and per \$1,000 of personal income. These two measures are displayed on the following page.

For 15 years, these measures were published by <u>The Chronicle of Higher Education</u>, along with the state tax appropriations data which appear in monthly issues of <u>Grapevine</u>. Beginning in 1987, these measures were no longer published in the <u>Chronicle</u>. They appear in a mid-winter issue of <u>Grapevine</u>, as well as being included in this volume.

Caution must be exercised in utilizing and interpreting these two comparative measures, because they use only state tax appropriations as a single revenue source. While state tax appropriations are the largest revenue source in the public sector and are an important revenue source in the private sector, a more complete analysis needs to incorporate more sources of revenue. These would include local taxes, student tuition, and non-tax sources.

Nonetheless, with the approval of the <u>Grapevine</u> Advisory Committee and with this cautionary note, these measures are included as a service to readers.

Acknowledgments

The contributions of many individuals go into the production of these summary documents and <u>Grapevine</u> each month. The producers of state tax appropriations data include a network of "correspondents" in the 50 states, and their willing and consistent efforts provide a solid foundation for <u>Grapevine</u>.

The Advisory Committee, formed in 1984, includes those persons whose names appear below. The Advisory Committee meets annually during the In-Service Education Program of the State Higher Education Finance Officers. These experts have provided invaluable technical and policy advice which has enabled <u>Grapevine</u> to maintain its original purpose of providing timely data while being improved significantly in accuracy in recent years.

This volume is the 29th consecutive annual report published by the Office of Communications Services at the National Association of State Universities and Land-Grant Colleges. Their continued interest and assistance are appreciated very much.

To Gwen B. Pruyne, Managing Editor, the heartfelt thanks of <u>Grapevine</u> readers, as well as myself, are extended.

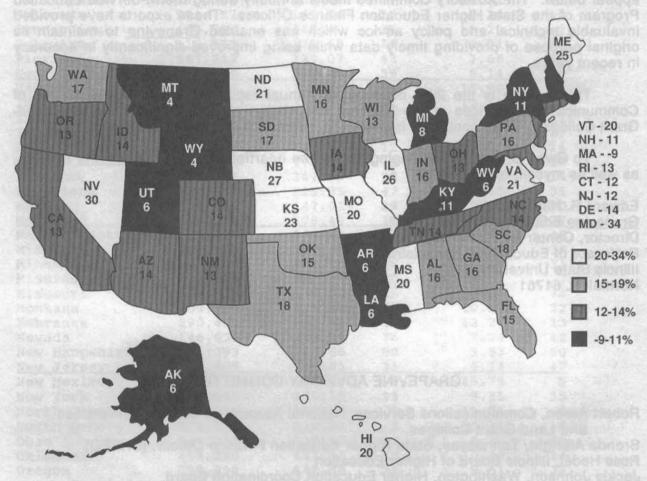

Edward R. Hines, Ph.D.

WHAT THE FIGURES ARE INTENDED TO MEAN

The ground rules used to achieve an approach to uniformity of reporting are enumerated below. Diversities of practices among the 50 states make it impossible to eliminate all inconsistencies and to accomplish absolute comparability among states and among institutions. We emphasize that comparisons are of limited usefulness but have value if correctly interpreted.

- 1. Report only appropriations; not actual expenditures.
- 2. Report only sums appropriated for annual operating expenses.
 - 3. For the state tax appropriations in complex universities, set out separately the sums appropriated for (or allocated to) the main campuses, branch campuses, and medical centers (even if on the main campus). The medical center item should include operation of colleges of medicine, dentistry, pharmacy, nursing, and teaching hospitals, either lumped as one sum or set out separately as preferred.

Include: 4.

- sums appropriated for state aid to local public community colleges 0 and for operation of state-supported community colleges, and for vocational-technical two-year colleges or institutes which are predominantly for high school graduates and adult students.
- 0 sums appropriated to statewide coordinating boards or governing boards, either for board expenses or for allocation by the board to other institutions or both.
- sums appropriated for state scholarships or other student financial 0
- sums destined for higher education, but appropriated to some other 0 state agency. Examples: funds intended for faculty fringe benefits may be appropriated to the State Treasurer and disbursed by that office; certain funds for medical and health education may be appropriated to the state department of health and disbursed from that department. Sometimes these sums have to be estimated because the exact amount disbursed cannot be known until after the end of the fiscal period.
- appropriations directed to private institutions of higher education at all levels.

5. Exclude:

THE REAL

- appropriations for capital outlays and debt service.
- appropriations of sums derived from federal sources, student fees, auxiliary enterprises, and other non-tax sources. Wisconsin 188, 119
 Wyoming 188, 518

****Beginning in FY1990, fr:	inge benefit	ts are in-

cluded in the institutional figures. change distorts year-to-year comparisons for each institution, but does not affect the comparisons of totals for the state as a whole. parisons of totals for the state as a whole.
+For FY1990, a portion of the state's lottery
proceeds are included in the institutional
figures. GRAHEVINE excludes funds which are
not derived from tax funds; therefore, the
institutional figures and their respective
percentages of gain are somewhat overstated

for FY1990. Note: The organization of this tabulation re-flects the restructing of higher education which became effective this year.
